

Treatments tried for Gastrointestinal and Feeding Issues in CHARGE

We are looking for parents of individuals with CHARGE syndrome (any age) to fill out a short questionnaire (paper or electronic) on treatments that have been tried (medications, surgery, behavioral interventions) for gastrointestinal and feeding difficulties.

We want to hear from you, the parents, on what you think works the best and worst for your child's (any age) gastrointestinal and feeding difficulties. We want to know what types of issues they have had, and what treatments have been tried. We have created a short (5-10 minute) questionnaire that can be filled out in paper version or online. The online link will be available at the conference and will be posted to the Facebook page after the conference.
