

The College at
BROCKPORT
STATE UNIVERSITY OF NEW YORK

Institute of Movement Studies for
Individuals with Visual Impairments

Children with CHARGE syndrome (4 to 12 years) needed for research study

This study will be assessing the gross motor skills in children and the impact of a home intervention upon gross motor performance

Duration:

Parental Questionnaires will take about 20 minutes;
Pre-Test will take your child approximately 20 -30 minutes;
Intervention will run for 6 weeks with the expectation that parents will work with their child on gross motor skills 2 times per week;
Post-test will take approximately 20-30 minutes.

Compensation:

Following the pre-test parents will receive a motor development kit and curriculum
Following the post-test participants will receive a \$50 gift card
