

Research:

Early motor development in CHARGE syndrome

Purpose of this study

This study aims to learn more about the motor development of young children (below 3.5 years old) with CHARGE syndrome. Gaining more insight into early motor development might help improve early support in these children.

Nature of Participation

Your child will take part in a playful, and validated, motor assessment. The assessment is video-recorded and takes approximately 20 minutes. In addition, you are asked to fill-out a developmental questionnaire.

What We Ask From You

If your child is below 3.5 years old and you want to participate: please return the completed consent form and indicate your preferred time slot on the registration list (at research desk).

Contact Information

For any questions, please contact Ms. Hitzert by email at m.m.hitzert@umcg.nl.
